

PROBLEM SOLVER

Many Customers Have Experienced The Following:

DRUMMOND™
A LAWSON PRODUCTS BRAND

PROBLEM:

Lubricating moving parts to reduce wear and stop squeaking

- Can't apply grease through tight gaps, cracks, openings and crevices
- Thin, oily lubricant slings off – won't adhere to metal
- Lubricant must be clear and non-staining
- Extreme temperatures necessitate frequent lubrication
- Metal locks and hinges keep rusting

SOLUTION:

Drummond™ Prizm Penetrating Gel Lubricant with PTFE

- Sprays out as a fine mist to penetrate deep into gaps and crevices, then sets up to a grease-like lubricant
- Highly adhesive gel resists sling-off, squeeze-out, vibration, impact and shock
- Colorless and virtually invisible in use
- Lubricates at a broad temperature range of -30°F to +530°F (-34°C to +277°C)
- Leaves a protective coating that prevents rust and corrosion

“Let me show you how it works”

Prizm is an all-purpose, penetrating gel lubricant. A unique combination of PTFE, natural and synthetic lubricants, and a high molecular weight polymer allows Prizm to penetrate, coat and cure to a clear grease-like gel that is virtually invisible when cured. Prizm protects against rust and corrosion, and reduces heat, friction and wear.

FEATURES:

- Penetrates – sprays on like a thin penetrating oil, then thickens to a grease-like lubricating gel – great for tight gaps and crevices
- Lubricates – reduces wear, stops squeaks and keeps parts moving smoothly and quietly
- Protects – leaves a protective coating that prevents rust and corrosion, and resists water washout, steam and salt spray
- Highly adhesive – stays where it's needed without being flung, squeezed or shaken off
- Clear and odorless – virtually invisible in use with no lingering smell
- Stable at extreme temperatures – lubricates from -30°F to +530°F (-34°C to +277°C)

APPLICATIONS:

- Open gears
- Locks
- Hinges
- Conveyor chains
- Rollers
- Cams
- Slides
- Bearings
- Dollies
- Manifold heat valves
- Piano-type hinges
- Nuts
- Bolts and more
